

Milestone 4: Form Design

Objective

The objective of this phase was to design a user-friendly and organized form interface for employees and managers to interact with the Smart Leave Approval System. The form was designed to improve usability, simplify data entry, and present information in a structured manner.

Overview

After creating the Leave Request table, a customized form was designed to display leave-related information in separate sections. The form layout was organized to ensure that users can easily enter, review, and manage leave requests.

The form design focused on improving user experience by grouping related fields together and reducing form complexity.

Form Structure

The Leave Request form was divided into multiple sections to organize information logically.

Section 1: Leave Details

This section captures basic leave information.

Fields Included

Leave Number

Employee

Manager

Leave Type

Start Date

End Date

Total Days

The screenshot shows a form design tool for a 'Leave Request' form. The form is divided into several sections:

- Employee Information:** Contains fields for 'Leave Number', 'Employee', and 'Manager'.
- Leave Details:** Contains fields for 'Leave Type', 'Start Date', 'End Date', and 'Total Days'.
- Leave Reasons:** Contains a field for 'Leave Reason'.
- AI Analysis:** Contains fields for 'AI Category', 'AI Risk Level', and 'AI Recommendation'.
- Approval Status:** Contains a field for 'Status'.

The sidebar on the left provides options to filter fields and view field types. The 'Form Design' area on the right allows for customizing the form layout, including adding and removing fields and sections.

Purpose

This section allows employees to provide essential leave request information and enables the system to calculate leave duration automatically.

Section 2: Leave Reason

This section captures the reason for requesting leave.

Fields Included

- Leave Reason

Purpose

Allows employees to provide justification for the leave request, helping managers make informed approval decisions.

Section 3: AI Analysis

This section displays AI-generated decision support information.

Fields Included

- AI Risk Assessment
- AI Recommendation

Purpose

Provides risk classification and recommendations based on leave duration and business rules.

Examples:

1. Low Risk
2. Medium Risk
3. High Risk

Recommendations such as:

1. Leave request appears normal.
2. Manager review recommended.
3. Extended leave requires additional review.

Section 4: Approval Status

This section displays the approval outcome.

Fields Included

- Approval Status

Status Values

- Pending
- Approved
- Rejected

Purpose

Allows employees and managers to track the progress of leave requests.

Form Layout Design

The fields were arranged to follow a logical workflow:

Employee View

1. Enter leave details.
2. Enter leave reason.
3. Submit leave request.

Manager View

1. Review leave details.
2. Review AI analysis.
3. Approve or reject request.

User Experience Considerations

The following design principles were applied:

Simplicity

Only relevant fields are displayed to users.

Readability

Fields are grouped into meaningful sections.

Accessibility

Users can easily navigate through the form.

Consistency

The form follows ServiceNow design standards.

Form Validation

Several validation mechanisms were incorporated into the form design.

Date Validation

>Start Date cannot be empty.

>End Date cannot be empty.

Mandatory Fields

1. Employee
2. Leave Type
3. Start Date
4. End Date

5. Leave Reason

Auto-populated Fields

Leave Number

Total Days

AI Risk Assessment

AI Recommendation

Benefits of the Form Design

The designed form provides:

- ✓ Improved user experience.
 - ✓ Faster leave request submission.
 - ✓ Better visibility into leave information.
 - ✓ Structured presentation of AI recommendations.
 - ✓ Simplified approval process.
-
