

Milestone 8: Workflow Automation and Approval Process Implementation

Objective

The objective of this phase was to automate the leave approval process using ServiceNow Flow Designer. The workflow was designed to eliminate manual tracking, streamline approvals, and ensure timely processing of leave requests.

Overview

In traditional leave management systems, approvals are often handled manually through emails or paper forms. To improve efficiency, an automated workflow was implemented in the Smart Leave Approval System.

The workflow automatically routes leave requests to managers, tracks approval decisions, and updates leave status accordingly.

Workflow Design

Workflow Name

Leave Approval Workflow

Platform

ServiceNow Flow Designer

Purpose

To automate the complete leave approval lifecycle from submission to final decision.

Workflow Trigger

Trigger Event

The workflow starts automatically when:

A new Leave Request record is created.

Trigger Conditions

- Employee submits a leave request.
 - Record is inserted into the Leave Request table.
-

Workflow Process

Step 1: Leave Request Submission

Description

An employee submits a leave request using the Apply Leave module.

Information Captured

- Employee Name
- Leave Type
- Start Date
- End Date
- Leave Reason

Outcome

A new leave request record is created.

Step 2: Total Days Calculation

Description

The system calculates the leave duration automatically.

Formula

Total Days = End Date - Start Date + 1

Outcome

The Total Days field is populated.

Step 3: AI Risk Assessment

Description

The system evaluates the leave duration and determines the risk level.

Risk Categories

Duration	Risk Level
1–3 Days	Low Risk
4–7 Days	Medium Risk
More than 7 Days	High Risk

Outcome

AI Risk Assessment field is populated.

Step 4: AI Recommendation Generation

Description

Based on the calculated risk level, the system generates a recommendation.

Examples

Low Risk

Leave request appears normal.

Medium Risk

Manager review recommended.

High Risk

Extended leave requires additional review.

Outcome

AI Recommendation field is updated.

Step 5: Status Update

Description

After submission, the system automatically updates the request status.

Status

Pending

Outcome

Request is ready for manager review.

Step 6: Manager Approval Request

Description

The workflow sends the leave request to the assigned manager for approval.

Manager Actions

- Approve
- Reject

Outcome

Manager receives the request for review.

Step 7: Approval Decision

Approved Scenario

Manager Action

Approve

System Action

Status updated to:

Approved

Rejected Scenario

Manager Action

Reject

System Action

Status updated to:

Rejected

Workflow Diagram

Benefits of Workflow Automation

Faster Processing

Eliminates manual approval routing.

Improved Accuracy

Automates calculations and status updates.

Better Visibility

Users can track request progress in real time.

Reduced Administrative Effort

Managers receive requests automatically.

Standardized Process

Ensures consistent handling of all leave requests.
